

SUPPORTING DEVICE FOR A PERSON'S BACK AND HEAD AREA

ABSTRACT

The invention relates to a supporting device (1) for the back and head of a human being. Said device comprises a partial area of a back supporting section at the level of the shoulder blade, a central supporting surface (4) in the region of a vertebral column and open areas which are arranged on the both sides of the central supporting surface (3) in such a way that the shoulder blade regions can be lowered beyond the central supporting area. The invention can be used for furniture for the household or workplace.
